

The high-performance top K 24 is suitable for all sound applications requiring a fast set-up, very high power reserves and a good sound. The 2 x 12" / 1.4" combination weighs just 35 kg including the integrated flying hardware, can be hung one above the other for longer arrays and is extremely compact. The optional flying bracket is very simple to attach using the ball lock pin and can be adjusted to the desired angle. For operation with a single amplifier channel, the system is also available in the xov version with an integrated switchable passive crossover.

The technical performance features of the K 24 and its exceptional compactness were only possible by means of a complex acoustic interplay between the individual components and their control systems.

As a result, the performance characteristics and quality attributes were optimised to such a level that they are able to compete with and even surpass significantly larger systems.

To increase the degree of efficiency, the two 12" low-midrange speakers are initially directed into an acoustic bandpass and then into a hybrid horn. The symmetrical set-up ensures even and balanced coverage.

The generously dimensioned elliptical horn featuring a curved design for wide coverage ensures a highly accurate and long throw.

The cabinet is fitted with a sophisticated reinforcement system in order to prevent unwanted resonance.

K 24

The drivers are installed such that the voice coils are in the same vertical plane to ensure phase coherence even when using the passive crossover.

The integrated Flying System

The Flying Cradle – up to three K 24 systems can be flown vertically.

Simple interconnection of systems by means of integrated Spacer.

Spacer with "parking space" for the Ball Lock Pin.

Integrated Flying System with four adjustable Splay Angles.

Bracket

K 24 as Stack
with K Sub 1801.

Accessories

Removable Wheel Board for simple transportation.

The Flying Bracket is very simple to attach using the Ball Lock Pin and can be adjusted to the desired angle.

The K 24 System

The K 24 not only performs well when used in the basic version, but can also be extended as desired to a larger system suitable for halls and open-air events.

Whether you opt for the G Sub 1801 (1 x 18") with its low tuning frequency, for the more punchy sounding K Sub 1502 (2 x 15") or for the direct radiating K Sub 1801 (1 x 18") is more or less a matter of taste. Depending on the configuration, all you have to do is load the preset in the HDLM 8 controller and the system will produce an excellent sound across a broad volume range.
