SpeakerMAN is the all-round audio tool for every event technician. Compact, powerful and versatile – ideal for quickly checking speakers and systems on site.

Test, check, measure, play music or drive speakers directly via Bluetooth – the SpeakerMAN combines numerous practical functions in a single compact device.

Order No. 01880

The signal generator

enables the generation of **sine waves, pink noise and sine sweeps.** This allows speakers, signal paths and entire systems to be tested quickly and easily.

The phase checker

helps to verify the correct **polarity and phase of speaker systems.** The receiver and signal generator are combined in a single unit.

The Bluetooth receiver

Thanks to the built-in Bluetooth receiver, the SpeakerMAN can also be used as a compact audio source and amplifier for conventional loudspeakers. The internal antenna reliably receives signals, e.g. from a smartphone, over a distance of at least **20 m.**

The two 15-watt amplifiers

With its two integrated, high-performance amplifiers, the SpeakerMAN can drive speakers even at higher power levels.

Power supply

is provided by a high-capacity **36 Wh lithium-ion battery,** which can be conveniently charged via the USB-C port. The battery life is up to **16 hours in Bluetooth mode** without recharging or approximately **6 hours for voice playback.**
